

Linearised temperature measurement with Pt100 sensor.

To avoid temperature signal attenuation during long-distance transmission, it converts Pt100 into standard analog current output DC 4~20mA (2 wire).

In this way, a stable and accurate figure can be collected and shown on the display of terminal instrument. The instrument includes PLC, digital display, industrial computer, etc.

- High quality, good anti-interference, high cost performance.
- Large round head installation.
- -50~400°C or special range.
- Output: 4~20 mA.
- ZERO / SPAN adjustable.
- Polarity protection ; Over-voltage ; Short-circuit.
