

The meanings of the LED symbols

PASS : enter the setting mode (please input the password : 1000)

Addr : the symbol representing the setting address.

bAud : the symbol representing the setting baudrate.

F-AnE : setup the parity check.

The relays of the first group (please input the password : 2000)

r1tP : select dew point, temperature and humidity.

r1Act : select the action Hi or Lo.

r1Set : setup the action determination value.

r1Hys : setup the action interval value.

r1no : setup the thedeadband.

r1dLy : setup the action delay time.

The relays of the second group.

r2tP : select dew point, temperature and humidity.

r2Act : select the action Hi or Lo.

r2Set : setup the action determination value.

r2Hys : setup the action interval value.

r2no : setup the deadband.

r2dLy : setup the original action time.

※ Relay 3, Relay 4 same steps as above. ※

(Please input the password : 3000)

Pus1 : setup the temperature compensation value.

Pus2 : setup the humidity compensation value.

Button instruction

[M] : option button [▶] : shift button

[▲] : 0~9 cycle button [E] : confirmation button

The operation instruction begins

PASS :

(1) press [M] to display PASS.

(2) press [▶], and then the LED at thousands place will blink.

(3) press [▲] to select a number that you need from 0→1→...→9.

※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

(4) press [E] to save the data and enter Addr.

※ The factory default is 1000

Addr : (1) press [▶] to check the setting values.

(2) press [▶] to display 10¹→10² in a circular manner.

(3) press [▲] to change from 0~9, A~F.

(4) press [E] to save data.

(5) press [M] to leave Addr and then enter bAud

bAud : (1) press [▶] to check the setting values.

(2) press [▲] to change it within 9.6K, 4.8K, 2.4K, 115.2K, 57.6K, 38.4K, 19.2K.

(3) press [E] to save data.

(4) press [M] to leave bAud and then enter FrAnE

FrAnE : (1) press [▶] to check the setting values.

(2) press [▲] to change it within N.8.1, N.8.2, E.8.1, O.8.1.

(3) press [E] to save data.

(4) press [M] to leave Frame and then enter the measured value

PASS :

(1) press [M] to display PASS.

(2) press [▶], and then the LED at thousands place will blink.

(3) press [▲] to select a number that you need from 0→1→...→9.

※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

(4) press [E] to save the data and enter r1tP.

※ The factory default is 2000

r1tP : (1) press [▶] to check the setting values.

(2) press [▲] to change CO2, temperature and humidity.

(3) press [E] to save data.

(4) press [M] to leave r1tP and then enter r1AC

r1ACt : (1) press [▶] to check the setting values.

(2) press [▲] to setup the action Hi or Lo.

(3) press [E] to save data.

(4) press [M] to leave r1ACt and then enter r1SET

r1SET :

(1) press [▶] to check the setting values.

(2) press [▶], and then the LED at thousands place will blink.

(3) press [▲] to select a number that you need from 0→1→...→9.

※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

(4) press [E] to save the data.

(5) press [M] to leave r1SET and then enter r1HYS.

r1HYS :

(1) press [▶] to check the setting values.

(2) press [▶], and then the LED at thousands place will blink.

(3) press [▲] to select a number that you need from 0→1→...→9.

※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

(4) press [E] to save the data.

(5) press [M] to leave r1HYS and then enter r1no.

r1no :

(1) press [▶] to check the setting values.

(2) press [▶], and then the LED at thousands place will blink.

(3) press [▲] to select a number that you need from 0→1→...→9.

※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

(4) press [E] to save the data.

(5) press [M] to leave r1no and then enter r1dLy.

r1dLy :

(1) press [▶] to check the setting values.

(2) press [▶], and then the LED at thousands place will blink.

(3) press [▲] to select a number that you need from 0→1→...→9.

※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

(4) press [E] to save the data.

(5) press [M] to leave r1dLy and then enter r2tP.

r2tP : (1) press [▶] to check the setting values.

(2) press [▲] to change CO2, temperature and humidity.

(3) press [E] to save data.

(4) press [M] to leave r2tP and then enter r2ACt

r2ACt : (1) press [▶] to check the setting values.

(2) press [▲] to setup the action Hi or Lo.

(3) press [E] to save data.

(4) press [M] to leave r2ACt and then enter r2SET

r2SEt :

- (1) press **►** to check the setting values.
 - (2) press **►**, and then the LED at thousands place will blink.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.
- (4) press **E** to save the data.
 - (5) press **M** to leave r2SEt and then enter r2HYt.

r2HYt :

- (1) press **►** to check the setting values.
 - (2) press **►**, and then the LED at thousands place will blink.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.
- (4) press **E** to save the data.
 - (5) press **M** to leave r2HYt and then enter r2no.

r2no :

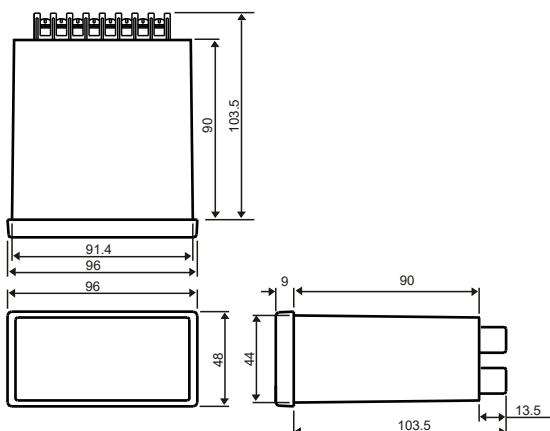

- (1) press **►** to check the setting values.
 - (2) press **►**, and then the LED at thousands place will blink.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.
- (4) press **E** to save the data.
 - (5) press **M** to leave r2no and then enter r2dL.

r2dLY :

- (1) press **►** to check the setting values.
 - (2) press **►**, and then the LED at thousands place will blink.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.
- (4) press **E** to save the data.
 - (5) press **M** to leave r2dLY and then enter measured value.

※ Relay 3, Relay 4 same steps as above. ※

Dimensions (mm)

PASS :

- (1) press **M** to display PASS.
 - (2) press **►**, and then the LED at thousands place will blink.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

- (4) press **E** to save the data and enter PUSI.
- ※ The factory default is 3000

PUSI :

- (1) press **►** to check setting values.
 - (2) press **►** $10^3 \rightarrow 10^2 \rightarrow 10^1 \rightarrow 10^0 \rightarrow$ plus sign and minus sign LEDs will blink and cycle in a regular order.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.

- (4) press **E** to save data.

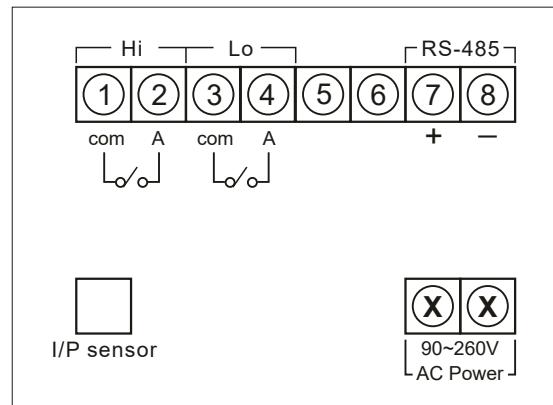

- (5) press **M** to leave PUSI and then enter PUS2

PUS2 :

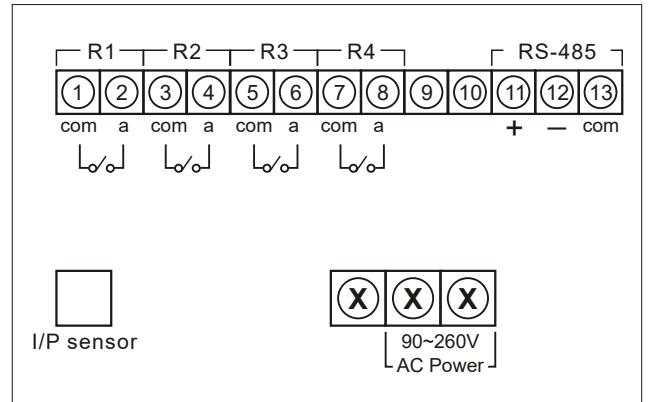

- (1) press **►** to check setting values.
 - (2) press **►** $10^3 \rightarrow 10^2 \rightarrow 10^1 \rightarrow 10^0 \rightarrow$ plus sign and minus sign LEDs will blink and cycle in a regular order.
 - (3) press **▲** to select a number that you need from $0 \rightarrow 1 \rightarrow \dots \rightarrow 9$.
- ※ The operation steps for the hundreds place, tens place and ones place are the same with the above.
- (4) press **E** to save data.
 - (5) press **M** to leave PUS2 and then enter the measured value

■ Wiring diagram
